Today's update 4/11/19, all digging on Ramsey is complete and is in boxes stored onsite. OMI continued digging Section 1 I am hoping they complete all the way to Berm 1 tonight, they will be working late. Tomorrow night they can work 24 hours to have soil up before rain on Saturday and berms up also.

OMI is onsite working on the warehouse dry goods part of the plant, they were slowed down this am due to bringing in equipment and we did have the Fire Marshal and the Chemical Review Board and OSHA all here at one time doing some sort of investigation I was not around to know what they were looking at. Again they are working late and can update progress in am when I return. I do know they loaded one metal box and have moved in more roll off and are ready to continue working tonight. We are working towards having this area clean also by Saturday AM with rain in the forecast.

Pic attached of today's progress. Let me know if you are not wanting pictures are more or less of something.

The little bit of water in the ditch is being removed right now ahead of the digging, we did have a small shower.

I will update early AM

Hello Dodie,

I assume all of this is associated with firewater cleanup activities. I would also like information on the status of chemical cleanup on the plant.

Also, TCEQ indicated that they did not consider the rainfall as flushing but my understanding is that you were going to dig the soils anyway.

Gary Moore
